PROFESSIONAL SUMMARY

As a highly motivated front-end developer passionate about creating beautiful and user-friendly web interfaces and seeking a challenging position where I can utilize my skills in HTML, CSS, JavaScript, React.js, and frontend frameworks to contribute to the development of cutting-edge web applications. With a keen eye for design and a solid understanding of responsive web development, I am dedicated to delivering exceptional user experiences and driving business growth

SKILLS

- HTML5, CSS3, JavaScript, React.js
- Frontend Frameworks: Bootstrap, Tailwind CSS
- Backend Technologies: Express, Node.js
- Database & Authentication: MongoDB, Firebase

EDUCATION

Bachelor of Management   **June/2023 to Present**
Edward National University Pabna

PROJECTS

Dream Paint   Code Link | Live Site Link

- Secure User Authentication: Implemented a user authentication system using JWT (JSON Web Tokens) for secure and stateless authentication. Users can create accounts, log in, and access protected routes within the application.

- Payment Integration: Integrated a payment system to facilitate secure online transactions. Users can make payments for products or services within the application, ensuring a seamless and convenient payment experience.

- Role-Based Authorization: Developed an authorization system with different user roles, such as admin and user. Admins have access to additional functionalities like managing user accounts and performing administrative tasks, while regular users have limited access.

- Multiple Authentication Methods: Implemented a flexible authentication system that offers email-password and Google login authentication. This allows users to sign up and log in using their email and password or their Google account, providing a seamless and convenient authentication experience.

- Pagination: Incorporated a pagination feature to enhance the browsing experience within the marketplace. Users can navigate through a large number of product listings efficiently by accessing different pages, improving usability and performance.

- Product Management: Developed a comprehensive product management functionality allowing users to upload and update their products. Sellers can upload product details such as title, description, price, and images, and have the ability to update and modify their product information as needed. This feature empowers sellers to maintain control over their product listings and keep them accurate and up-to-date.

- Multiple Authentication Methods: Implemented a versatile authentication system that includes email-password authentication, Google login authentication, and GitHub login authentication. This provides users with a variety of options to sign up and login based on their preferred authentication method.

- Private Routes: Implemented secret routes that restrict access to certain pages and functionalities only to authenticated users. This ensures that sensitive or personalized information is protected and can only be accessed by authorized individuals.

- Bookmark Feature: Developed a bookmark feature that allows users to save and organize their favorite blog posts or articles. Users can bookmark specific content for quick and convenient access, enhancing their browsing and reading experience within the application

Communication skills

- Bangla (Native)
- Fluent in English
- Talkative in Hindi
